

# Ryan Zernach Full-Stack AI Systems Engineer • Agentic Infrastructure & Product Engineering

Portfolio: [Ryan.Zernach.com](https://ryan.zernach.com) • Email: [Ryan@Zernach.com](mailto:Ryan@Zernach.com) • [LinkedIn](#) • [GitHub](#) • [Remote](#) • [FinTech](#)

## HIGHLIGHTS

- Distributed systems engineer with 10+ years of engineering Payments, Agents, Mobile Apps, Websites, DevOps + MLOps Systems
- Scaled CellarChat™ tool-calling agent to 1M+ active members, complete with RLHF & CI/CD LLM evaluation scoring pipelines
- Engineered Apple Pay subscriptions to lift recurring revenue by 25%+ which lifted mobile app ratings to 4.9★ (10k+ reviews)
- Completed Gauntlet AI engineering fellowship with 2% acceptance rate and mastered the art of agentic AI orchestration
- Designed observable backend systems that support autonomous AI-powered VoIP eCommerce payment automations
- Awarded Top 10 of 10,000 international projects in 2024 NASA Space Apps hackathon with AI Voice Assistant

## TECH STACK

### Programming Languages

TypeScript, Python, Rust, Golang, Java, C#, Ruby, Swift, Kotlin, Bash, JavaScript, PHP, C++, Objective-C, R, Solidity, Dart, Flutter, XML

### AI Systems + Machine Learning

LLMOps, vLLM, LiteLLM, RAG, Agents, MCP, Vector Embeddings, Evaluations, Semantic Kernel, LangChain, Langfuse, Computer Vision, PyTorch, Knowledge Graphs, TensorFlow, Scikit-Learn, Bedrock, Foundry

### Platform + Backend Engineering

DevEx, Node.js, FastAPI, Django, Nest.js, Express, .NET Core, OpenAPI, Microservices, REST, GraphQL, WebSockets, Webhooks, gRPC, Kafka

### Data + Persistence

PostgreSQL, SQL, NoSQL, Redis, Vector Databases, ETL, Snowflake, Graph Databases, Entity Relationships, Caching, BigQuery, PySpark

### Cloud Infrastructure + DevOps

AWS, Azure, GCP, Cloudflare, Docker, GitHub Actions, Terraform, Kubernetes, CI/CD, CloudOps, Blue/Green, DNS, Networking

### Front-End & Product Engineering

React, React Native, iOS, Android, Web, Swift, Kotlin, Flutter, Expo Router, Next.js, Redux, Streamlit, Animations, Design, User Feedback, Playwright

### Distributed Systems + Operations

Queues, Redis, RabbitMQ, Analytics, Pub/Sub, Linux, Airflow, VoIP, Cron, WebRTC, Observability, OpenTelemetry, Rate Limiting, Horizontal Scaling, Machine Learning CI/CD, Event-Driven Architecture, Load Balancing

### Security, Identity + Compliance

AuthN, AuthZ, OAuth, SOC 2, Identity, Role-Based Access Control, JWT, Secure Systems Design, SSO, API Security, Secrets Management

### Payments, Communications + Integrations

PCI Compliance, Stripe, Apple Pay, IAP, Billing, Subscriptions, Wallets, Twilio, SMS, Push Notifications, HTTP APIs, Marketing Tech, SMTP/IMAP

### Blockchain + Web3

Ethereum, Solana, dApps, WalletConnect, MetaMask, Polygon, Solidity, Smart Contracts, Ethers.js, Tokens, ERC-20, ERC-721

## EXPERIENCE

### Independent Full-Stack AI Systems Engineer • USA • Remote

July 2025 - Present

- Building agentic products and back-end systems across Python, Typescript, vector embeddings + OSS large-language models
- Automated eCommerce marketplace responsibilities using Twilio VoIP, realtime voice agents + DALL-E image generations
- Dockerized scalable Robotic Process Automation (RPA) via Kubernetes, local vLLM inferences, and agentic web-scraping
- Published TranslateWallpaper, a cross-platform mobile app to make LLM-powered language-learning wallpapers images

### Senior Full-Stack AI Systems Engineer • CellarTracker • Seattle • Remote

Aug 2023 - Jul 2025

- Scaled agentic CellarChat™ to 1M+ international members & built world's highest-rated #1 wine app
- Architected RLHF pipeline to fine-tune OpenAI's GPT-4o, OpenAPI CI/CD triggers, embeddings, & evals
- Integrated ML wine recommendations using Azure-ML + world's largest online database of wine reviews
- Maintained Python, TypeScript, React Native, C#/.NET, SQL, Redis, CI/CD, Azure AI Foundry + PromptFlow
- Helped to boost app store ratings to 4.9★ average with 10,000+ verified 5-star ratings on iOS and Android
- Embedded Apple Pay subscriptions in the React Native app to generate additional 25%+ recurring revenue
- Developed backend Python systems supporting agentic workflows, support tickets, & account management
- Improved user's experience of cellar management CRUD workflows to improve consistency and reduce taps
- Implemented PyTorch OCR image-to-text search, high-performance barcode scanning, and activity feed posts
- Streamlined the Redux store for fast, efficient, and persistent global state management between app sessions
- Rebuilt the React Native app's analytics implementations for tracking critical user interactions and in-app behavior
- Arranged A/B tests during paywall & onboarding experiences using phased rollout schedules for marketing analysis
- Migrated 25+ year old legacy support ticket system from Active Server Pages (ASP) to TypeScript Express framework

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                              |
